The Writing Is On The Wall.

Channel Letters

Prominent and eye-catching, your brand can be displayed in the form of channel letters.

Channel letters are individually fabricated letters that will either mount directly to the wall surface or onto a raceway.
(Raceway mounted channel letters are the most landlord-friendly. Fewer holes have to be drilled for installation, as the raceway safely houses the electrical components.)

Channel letters can be non-illuminated or illuminated with neon or LEDs. Illuminated letters can also be open faced or halo-lit.

The distinct possibilities are exciting with this form of signage, all providing dramatic visual effects.

Send A Clear Message.

Message Centers

The addition of a message center to your sign can allow you to speak to your potential customers directly.

Although there is still a demand for the traditional manual system with changeable letters, today's technology enables you to send your message electronically, efficiently and with a strong visual impact.

Programmable to display time and temps, ever-changing copy messages, animation or full color videos, modifications are easily done from a computer.

The efficiency, flexibility and visibility of an electronic message center - along with the significant sales it can generate make it a cost-effective, sound business investment.

Lofty Ideas.

Pylon & Pole Signs

A pylon or pole sign is an excellent choice when the location of your establishment demands long distance visibility from your main I.D. sign.

Message centers and changeable panels are often incorporated into the design and construction of these impressive structures.

These types of signs lend themselves well to shopping centers with multi-tenants or high traffic, high speed areas where a business could otherwise go unnoticed.

Identify Yourself.

Monument Signs

The favorable impression a main I.D. sign can make on the public is an important aid to the success of a business.

Because of their prominence and stature, monument signs tend to convey a feeling of strength and solidity.

Free-standing and lower in profile, they provide maximum visibility at eye level. Ideal for main entrances or where traffic is slower paced.

Off The Wall.

Wall Mounted Signs

Opportunity or necessity - a wall mounted sign may be the best or only option for you.

These can be very simplistic in design and fabrication or can hold several different sign elements, such as channel letters, message centers or neon.

Something Old, Something New.

Neon Signs

Neon is every bit as eye-catching today as it was almost 100 years ago.

Neon brings a nostalgic essence to modern signage in an array of vibrant colors - a classic look that demands attention.

The applications for neon are as varied as its color palette - exposed neon can be used by itself or as illumination in channel letters.

Used as perimeter lighting, neon can enhance the architectural beauty of your building...or in some cases, create it.
